Step-by-Step Guide to Create the Clear Reflections Website

Step 1: Understand the Project

First read the problem statement carefully.

Your website should:

- Show **different types of mirrors**
- Allow users to **view mirrors by category**
- Show **images and short descriptions**
- Provide **downloadable Word documents for detailed features**
- Show the **company location on a map**
- Provide a **contact email**

Step 2: Plan the Website Pages

Before starting development, decide the pages your website will have.

Create these main pages:

1. **Home Page**
2. **Mirror Categories Page**
3. **Material Types Page**
4. **Gallery Page (optional but good)**
5. **Contact Us Page**

Planning first makes development easier.

Step 3: Create a Project Folder

Make a main folder for the project.

Inside it create subfolders:

- **images** → store mirror pictures

- **documents** → store Word files with mirror details
- **css** → styles (optional)
- **js** → JavaScript files (optional)

Organizing files properly is important for projects.

Step 4: Design the Home Page

The Home page is the **first page users see**.

Add these sections:

Header

- Company logo
- Website title **Clear Reflections**

Navigation Menu

Create links to:

- Home
- Mirror Categories
- Materials
- Contact Us

Banner Section

Add large images of mirrors.

Introduction Section

Write a small paragraph about the company such as:

- What Clear Reflections sells
- Types of mirrors available
- Quality and designs

Featured Mirrors Section

Display some example mirrors with images.

Step 5: Create Mirror Category Section

Create a page where mirrors are grouped by **room type**.

Categories may include:

- Living Room Mirrors
- Bathroom Mirrors
- Dressing Mirrors
- Bedroom Mirrors
- Custom Mirrors

Each category should display:

- Mirror image
- Small description
- Link to detailed document

This helps users quickly find the mirror they want.

Step 6: Create Material Based Categories

Create another page where mirrors are grouped by **frame material**.

Examples:

- Wooden framed mirrors
- Acrylic bordered mirrors
- Metal bordered mirrors
- Decorative mirrors
- LED mirrors
- Bluetooth mirrors

Each material category should also display mirror images and short descriptions.

Step 7: Add Mirror Details

For every mirror:

Show:

- Mirror image
- Name of mirror
- Short description

The **full features should not be on the webpage**.

Instead:

- Create **Word documents** containing detailed specifications
- Add a **download or view link** so users can open the document

Store these files in the **documents folder**.

Step 8: Create Navigation Between Pages

Every page must have the **same navigation menu** so users can move around the site easily.

Example navigation flow:

Home → Categories → Mirror Details → Contact

This improves usability.

Step 9: Create the Contact Us Page

This page must contain:

Company Information

- Company name
- Address
- Phone number (optional)
- Email address

Email Feature

When users click the email address, it should open their **email client to send a message**.

Step 10: Add Map Location

Display the company location using **Geolocation or Google Maps**.

This map should show:

- Company address
- Location marker

Users should be able to see where the shop is located.

Step 11: Add Images

Collect mirror images for each category.

Examples:

- Living room mirrors
- Bathroom mirrors
- LED mirrors

Place these images inside the **images folder** and use them in the pages.

Step 12: Test the Website

Open your website in different browsers:

- Chrome
- Firefox
- Edge

Check if:

- Navigation works
- Images load properly
- Documents download correctly
- Map shows correctly

Step 13: Improve the Design

Make the website look better by:

- Using consistent colors
- Aligning images properly
- Adding spacing between sections
- Using headings and subheadings

You may use **Bootstrap or CSS** for styling.

Step 14: Final Check

Before submitting the project ensure:

✓ All pages are linked properly
✓ Categories display correctly
✓ Images are visible
✓ Word documents open/download

✓ Contact page works
✓ Map location appears

✅ **Final Output:**
You will have a complete **multi-page website for Clear Reflections mirror store.**
